

OOTP 11-High School Player Database

Which simply means all players are draft eligible right out of high school at age 18 (or younger if they started their actual careers younger than 18).

Using this replacement Stats Folder you can use the newly updated OOTP11 drafting process to build your team through the draft.

The file contains ALL major league players contained in the Lahman plus many have their actual complete minor league MLE's included so if you choose to use recalc they will progress similarly to how they progressed in real life.

Several thousand Negro League, career minor league stars, Japanese and Korean professional players are included in this db as well so prepare yourself to possibly have Oscar Charleston and Ty Cobb in the same outfield! All these players have had their real life stats turned into MLE's as well so the playing field remains level.

As this is an ODB file you can import history as was not possible previously using the standard Lahman format as this database has way way way too much information for the CSV format to handle.

To use this folder please rename the Stats folder that comes with the game to something else and put this folder in its place in the My Documents\Out of the Park Developments\OOTP Baseball 11 folder.

Then

PLAY BALL!
